Please allow me to acquaint you with the HASP+ communications software product. HASP+ is a highly effective and generalized product which allows VAX/VMS and PDP-11's running RSX-11M/11M+, TSX-Plus, or RT-11, to emulate a Multileaving Hasp Workstation for communication with major mainframes and networks. HASP+ also runs in "Host" mode allowing communications with other workstations. HASP+ requires only a DUP-11 or DU-11 for Unibus processor or a DUV-11 or a DPV-11 for Q-bus. HASP+ also supports the DMF-32 synchronous port for the lowest overhead on VAX.

> HASP+ is the successful result of 13-plus years of world-wide field experience backed by the best support service in the business, with more than a thousand satisfied customers as a result.
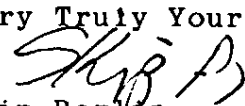

> HASP+ is very competitive in price... as a matter of fact, at
least 50% less expensive than comparable products due to Datanex's
> efficiencies and corporate philosophies.

I am also enclosing information on BARR/HASP+. BARR/HASP+ is a combination software/hardware device. When installed on an IBM PC, BARR/HASP+ allows the PC to operate as a stand alone Hasp remote job entry workstation.

To order HASP+ you must sign our standard license agreement and return same to us with your purchase order. Datanex, too, offers a 30-day no risk acceptance period for our DEC HASP+ products. BARR/HASP+ does not require a license agreement and is deliverable within 30 days.

Thanks again for your interest in Datanex. If you have any questions whatsoever please contact me.

Very Truly Yours,

Skip Berlin
